DATA ANALYSIS

UFO SIGHTINGS

KAVYA SHABNAVEES

ASSIGNMENT - JAVASCRIPT

PROJECT INTRODUCTION:

This purpose of this assignment is to read in the data from a list of dictionaries of UFO sightings to a table that allows users across the world to fetch this information.

TECHNICAL REQUIREMENTS:

- JavaScript
- D3.js
- HTML
- CSS

CODE EXPLANATION:

For designing the code, we used a dataset provided with list of dictionaries and loaded them to a table with JavaScript. After the reading the data into a table, we designed HTML page to provide an interactive web page that could help get specific data based on filters within a form (can search with a single or multiple filters).

LIMITATIONS:

- The dataset we are provided with contained data that is limited to single country "United States".
- Also, we could see that we have data for only 13 days and it is more than 9 years old. (~ 110 sightings)
  For instance, when tried to get some recent updates on sightings, I visited a site, http://ufostalker.com/, which reports more than 5000 sightings in just last year.
